

Skywin Billing - Sales Return Test Guide

Editable credit notes + Disc. % column

20 Aug 2026 Live: <https://skywin.qwicksapp.com/>

Log in first. Hard-refresh (Cmd+Shift+R / Ctrl+Shift+R) so you are not on a cached page.

These two features are live: edit a saved sales return, and line Disc. % on the form and printed credit note.

1. Create a sales return with Disc. %

Open Sales Return, add a line, set Disc %, save, then print and confirm the Disc. % column.

1. Open <https://skywin.qwicksapp.com/returns> (Sales Return tab / Credit Notes).
2. Optionally pick Against Invoice and a customer.
3. Search and add at least one product.
4. Set Qty, Rate, and Disc % (e.g. Disc % = 10). Amount should be less than Qty x Rate.
5. Click Save Return.
6. Open the new credit note (View) and Print Credit Note.
7. On the print, columns should be: #, Item, HSN, Qty, Rate, Disc. %, GST%, Amount.

Pass: Disc. % shows on print; Amount is after discount; totals look correct.

Fail: Disc. % column missing, amount ignores discount, or save fails.

2. Edit an existing sales return

Saved credit notes can be edited from the list or the detail page. Saving updates lines, totals, and stock.

1. On /returns, find a credit note and click Edit (or open View, then Edit).
2. URL should be /returns/{id}/edit. Banner shows Editing credit note RET-...
3. Change Disc %, Qty, or Rate. Add or remove a line if you want.
4. Click Update Return.
5. You return to the credit note view. Print again.
6. Printed Disc. %, Amount, and Grand Total must match the edited values.

Pass: Edit saves; print matches the new Disc % / amounts.

Fail: No Edit button, update errors, or print still shows old values.

3. Disc % = 0 / old returns

Older credit notes (before this change) have no discount stored. They should still open and print.

1. Open an older credit note if you have one.
2. Print: Disc. % column is present; cell may be blank or 0 for old lines.
3. Edit that return, set Disc % to 5, Update, print again - Disc. % should show 5.00.

Pass: Old bills still print; after edit, Disc. % appears.

Fail: Old credit note crashes or print layout breaks.

4. Stock check (edit)

Editing reverses the previous return stock, then applies the new qty. If stock was already sold from the return batch, Update may fail with insufficient stock - that is expected.

1. Note stock of a product before editing a return that includes it.
2. Edit the return: increase returned Qty, Update.
3. Stock for that product should rise by the extra returned qty (Products or Stock page).
4. Edit again: decrease Qty, Update. Stock should fall by the difference.

Pass: Stock moves with the edited return qty.

Fail: Stock unchanged after a successful update, or unexplained stock jumps.

Checklist

- [] 1. Create return with Disc %; print shows Disc. % and correct Amount
- [] 2. Edit return from list or detail; Update Return works
- [] 3. Re-print after edit matches new Disc % / totals
- [] 4. Old returns still open/print; optional stock check on edit
